

We can store bool int string and function in a variable.

Parameter
VS
argument

Parameter

```
function add(a, b) {  
  return a + b;  
}  
  
add(2, 2) // 4
```

Argument

4 type of higher order function .exmple

Different kinds

Works all
elements

forEach

map

Takes only one
values

filter

Exit every element
at once

reduce

Difference between
forEach and map

forEach

won't return anything

map

returns array(same)
